

ASAP

Silver Sol Solution 10ppm

What is ASAP Colloidal Silver Solution?

ASAP Colloidal Silver Solution consists of tiny (about 10 nanometers long) particles of pure elemental silver suspended in pure water. It is available in concentrations of 10 parts of silver for every million parts of water or 22 parts of silver for every million parts of water.

Is ASAP Colloidal Silver Solution safe?

When taken in the doses specified, ASAP Colloidal Silver Solution is safe for humans when taken internally or applied to the skin or eyes. Unlike some other colloidal silver products, this product is not thought to be a risk for permanent graying of the skin. This is a condition known as argyria and can be caused when large amounts of silver are absorbed into the skin tissue.

Are there people who should not take this colloidal silver?

We do not know of any. Because this colloidal silver has not yet gone through all the rigorous tests of the FDA, we cannot be 100% positive at this time. Many people have, however, taken large amounts of colloidal silver for years with no side effects. Finally, it appears that colloidal silver quickly becomes widely dispersed throughout the body and does not concentrate in any particular organ that it might damage.

What is the proper dosage of ASAP Colloidal Silver Solution?

It is recommended that one take at least 1 teaspoon, twice daily for age 12-adults and 2 teaspoons twice daily for children ages 5-11. For children 4 and under, 1 teaspoon twice daily is recommended. This product should not be taken in place of an antibiotic recommended by your healthcare provider.

Is all colloidal silver the same?

No, two colloidal silver solutions with the same concentration might produce very different effects. ASAP Colloidal Silver Solution has been shown, in recent tests conducted by Brigham Young University Microbiology Laboratory, to have a greater affect on the immune system than other colloidal silver products.

Does ASAP Colloidal Silver Solution harm the helpful bacteria in our intestines?

Individuals who have taken the ASAP Colloidal Silver Solution for an extended period of time report no negative gastro-intestinal side effects. This may be because most of the colloidal silver solution is processed by the kidneys and does not even enter the large intestine. If the small amount of colloidal silver solution that enters into the large intestine were to kill some of the helpful bacteria, the density of bacteria is so great in the large intestine that they quickly multiply to regain their normal level.

ASAP™

Caution

It is important that one consults his or her healthcare specialist if problems persist after 7 days of proper usage.
